On the front page of this leaflet it gives the overall costs of a set of Gates with a good quality Automation System installed with Radio Controls. This Page deals with some of the optional Control devices you may require in addition to the Radio Remotes.

GSM Intercom uses the Mobile phone network to call your Landline or Mobile Phone. You can then speak to a visitor and open the gates from your phone (Integral Keypad Included) **Installed £995 Plus VAT**

Price for multiple call buttons on application

Wireless Intercom uses a digital wireless signal to connect to handsets inside the property. You can then speak to a visitor and open the gates (Integral Keypad Included) **Installed £895 Plus VAT**

Keypad

This enables Tradesman, Friends & Family to gain entry with a pin code. Usually there are 2 separate functions that can be programmed, allowing both gates to be fully opened with one code and one gate leaf Partially opened for pedestrians with the second code

Installed £270 Plus VAT

Exit Ground Loop

This would be cut into or buried under your driveway, it is an induction device that detects metal objects like a vehicle and triggers the gate to open.

This is very useful for allowing visitors to leave, having been let in via the Intercom System or Keypad

Installed depending on drive surface From **£395 Plus VAT**

Exit Push Button

This would normally be sited on one of the inside Safety Beam posts, and would be used by pedestrians to exit through one gate leaf which would open partially when the button is pressed and close automatically after a short time delay.

Installed £95 plus VAT

Information

GATES

All our “Wrought Iron Style” Steel Gates are manufactured to a very high standard in our own workshops.

The hinge style and bottom rail is 40mm square steel hollow section, the closing style is 40mm x 15mm solid steel, all horizontal rails are 40mm x 10mm solid steel, main upright bars 20mm square steel hollow section, lower bars 12mm round or square solid steel. Any decorative scrollwork is formed with 20mm x 6mm flat bar. Decorative circles are formed with 20mm x 8mm bar.

All metalwork is hot zinc sprayed for complete rust protection. After Hot Zinc Spray the gates are finished with three coats of semi gloss vinyl spray paint for long term maintenance free use.

We use the wrap around type hinges for the traditional look and more importantly for safety. These hinges allow the gate to pivot without decreasing the gap between the gate and post, which can be a danger point when gates are automated.

All our gates are suitable for Automation, the most popular automation system for this type of gate is underground motors as they do not spoil the appearance of the gates as they are hidden below the road and become the bottom hinge of the gates.

POSTS

Posts Are available for either building into brick piers or to stand alone.

The build in type are hot dip galvanised and are fitted with elongated hinges and foundation plates to carry the Gate Motors. The hinges are positioned between the piers but towards the inside of the property for safety, again to avoid entrapment between the gate and brickwork when the gate opens.

There is not enough strength in brick piers alone to hang automated gates on to unless some form of reinforcing is built into the foundations and carried on up through the brickwork to tie everything together.

Our Posts are normally installed together with our own or the customers builder. He would dig out the foundation holes and we would set up the post kit in the holes with a Tripod & Spacer bar system, which allows us to set up accurately ready for hanging the gates after the brickwork is completed.

When we install the posts we also run cables for accessories such as safety photocells that will be mounted on the brickwork with cables hidden inside.

Stand alone posts are used when brickwork is not required.

These posts are usually 150mm Square Steel Hollow section hot dip galvanised and vinyl spray painted and maintenance free.

The post can be topped with Four Times Back Weathered Cappings, Ball Cappings or Outdoor Lanterns.

We also manufacture & install matching Railings and Pedestrian Gates.

The Railings can be full height and free standing or wall mounted and made to suit curves and slopes.

The Pedestrian Gates can also be fitted with a manual lock and keys or an electronic lock triggered with a Keypad or Intercom. Pedestrian Gates can also have a gate closer fitted to make sure the gate is not left open.
