Information

HARDWOOD GATES

We manufacture our hardwood gates using kiln dried Iroko hardwood timber, an extremely durable and long lasting timber which has minimal movement. This is an extremely durable West African timber that does not require any treatment.

Iroko gates are partly inconsistent in colour due to the species type, however all timbers will naturally weather down evenly over a short period of time to a silver grey colour. Wood stains can be applied to prevent unsightly staining due to rainwater, although this is only for cosmetic purposes.

Rubio Monocoat 'Royal' Oil Application £395 + VAT

POSTS

Posts are available for either building into brick piers or to stand alone.

The build in type are hot dip galvanised and are fitted with elongated hinges and foundation plates to carry the Gate Motors. The hinges are positioned between the piers but towards the inside of the property for safety, again to avoid entrapment between the gate and brickwork when the gate opens.

There is not enough strength in brick piers alone to hang automated gates on to unless some form of reinforcing is built into the foundations and carried on up through the brickwork to tie everything together.

Our Posts are normally installed together with our own or the customers builder. He would dig out the foundation holes and we would set up the post kit in the holes with a Tripod & Spacer bar system, which allows us to set up accurately ready for hanging the gates after the brickwork is completed.

When we install the posts we also run cables for accessories such as safety photocells that will be mounted on the brickwork with cables hidden inside.

Stand alone posts are used when brickwork is not required.

These posts are usually 150mm Square Steel Hollow section hot dip galvanised and vinyl spray painted and maintenance free.

The post can be topped with Four Times Back Weathered Cappings, Ball Cappings or Outdoor Lanterns.

We also manufacture & install matching Railings and Pedestrian Gates.

We Recommend that all Timber gates that are going to be Automated, to be installed on Purpose Made Maintenance free Hot Zinc Coated Steel Posts, finished black to match the gate hinges.

This means that the gates are much less likely to cause problems to the Automatic Gate System, also most of the cables can be concealed inside the posts for much neater finished job.

We do offer Rubio Treated Constructional Green Oak posts with pyramid shaped tops. Please be aware that due to the section sizes these products are prone to large natural shaking and an element of movement especially during the summer months

HINGE AND MOTOR PLATE ARRANGEMENT FOR
TIMBER GATES

NOTE A MODIFIED ARRANGEMENT IS REQUIRED IF
BUILDING INTO BRICK PILLARS

HINGE AND MOTOR PLATE ARRANGEMENT FOR TIMBER GATES

WHEN GATE ARE HUNG ON OFF-SET HINGES YOU
LOOSE AT LEAST 360MM OF CLEAR OPENING WIDTH BUT THERE ARE NO GAPS NEXT TO HINGES WHEN CLOSED

On the front page of this leaflet it gives the overall costs of a set of Gates with a good quality Automation System installed with Radio Controls. This Page deals with some of the optional Control devices you may require in addition to the Radio Remotes.

GSM Intercom uses the Mobile phone network to call your Landline or Mobile Phone. You can then speak to a visitor and open the gates from your phone (Integral Keypad Included) **Installed £995 Plus VAT**

Price for multiple call buttons on application

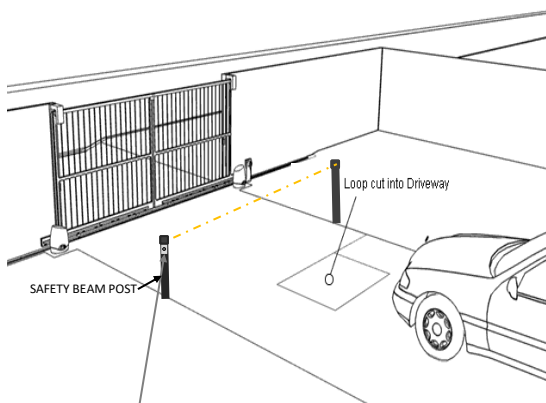

Wireless Intercom uses a digital wireless signal to connect to handsets inside the property. You can then speak to a visitor and open the gates (Integral Keypad Included) **Installed £895 Plus VAT**

Keypad

This enables Tradesman, Friends & Family to gain entry with a pin code. Usually there are 2 separate functions that can be programmed, allowing both gates to be fully opened with one code and one gate leaf partially opened for pedestrians with the second code

Installed £270 Plus VAT

Exit Ground Loop

This would be cut into or buried under your driveway, it is an induction device that detects metal objects like a vehicle and triggers the gate to open.

This is very useful for allowing visitors to leave, having been let in via the Intercom System or Keypad

Installed depending on drive surface From **£395 Plus VAT**

Exit Push Button

This would normally be sited on one of the inside Safety Beam posts, and would be used by pedestrians to exit through one gate leaf which would open partially when the button is pressed and close automatically after a short time delay.

Installed £95 plus VAT
